FINAL EXAMINATION

TRIMESTER 1, 2018/2019

PMT0301 – MATHEMATICS III

(All sections/ Groups)

15 OCT 2018
9.00 a.m. – 11.00 a.m.
(2 Hours)

Question	Marks
1	/10
2	/10
3	/10
4	/10
Total	/40

INSTRUCTIONS TO STUDENTS

1. This question paper consists of **EIGHT** printed pages excluding cover page and statistical table.

2. Answer **ALL** FOUR questions. All questions carry equal marks and the distribution of the marks for each question is given.

3. Please write all your answers in the **QUESTION BOOKLET**. All necessary working steps **MUST** be shown.

Question 1

(a) Find the symmetric equations of the line passing through the point $(1,0,6)$ and perpendicular to the plane $x+3y+z=5$. [1.5 marks]

(b) Find an equation of the plane that passes through the point (2,-2,0) and contain the line with parametric equations $x=1+4t$, $y=-4+3t$, $z=-t$. Give your final answer in the form of $ax+by+cz=d$. [3.5 marks]

Continue...

(c) Given the following system of linear equations:

$$x - 2y + z = 1$$
$$y + 2z = 5$$
$$x + y + 3z = 8$$

Find the inverse matrix by using its adjoint, and hence solve the system of linear equations by using inverse method.

[5 marks]

Continue...

Question 2

(a) An arithmetic sequence has first term $a_1 = 5$ and fourth term $a_4 = 11$. How many terms of this sequence must be added to get 2700. [3 marks]

(b) Find the coefficient of the term that contains y^3 in the expansion of $\left(\sqrt{2} - 3y\right)^7$. [2 marks]

Continue...

(c) (i) The following data shows the weight (in kilogram) of 12 randomly selected bags of rice which are supposed to have a weight of 5 kilograms each.

5.01	4.98	5.02	5.00	4.99	5.00
4.97	5.02	5.00	5.01	5.01	5.00

Calculate the mean, median and mode. [2.5 marks]

(ii) Given below is the number of sales made last month for 10 sales staffs of a company:

5 3 $10+a$ $10-a$ 4 11 7 9 4 2

It is known that the sample variance is 11.8333. Find the possible value(s) of a **in nearest integer**. [2.5 marks]

Continue...

Question 3

(a) A group of 130 MMU students were surveyed, and it was found that each of the students surveyed liked at least one of the following three fruits: strawberries, grapes, and oranges.

3 students do not like fruits.
36 students like strawberries.
62 students like grapes.
56 students like oranges.
9 students like strawberries and grapes.
12 students like grapes and oranges.
x students like strawberries and oranges.
4 students like all three fruits.

(i) Draw a Venn diagram to visualize the above information. [3 marks]

(ii) Find the value of x from the Venn diagram obtained in part (i). [1 mark]

(iii) What is the probability of students who like grapes and oranges but not strawberries? [1 mark]

Continue...

(b) **[GIVE YOUR ANSWERS IN THE SIMPLEST FRACTION FORM.]**

Given event A and event B are two non-mutually exclusive events.

If $P(A)=\frac{1}{3}$, $P(A\cup B)=\frac{8}{15}$ and $P(A\cap B)=\frac{1}{5}$, find

(i) $P(B)$. [1.5 marks]

(ii) $P(A\mid B)$. [1.5 marks]

(iii) Are the events A and B independent? Justify your answer. [2 marks]

Continue...

Question 4

(a) Ahmad sells brownies to increase his personal income and the probability of making a sale is 0.04. Given that he randomly approaches 30 people, find the probability that he will make at least 2 sales. [3 marks]

(b) The number of traffic accidents that occur on a particular stretch of road during a month (30 days) follows a Poisson distribution with a mean of 4. Find the probability that

(i) less than two accidents will occur next month on this stretch of road. [2 marks]

(ii) at least one accident will occur in the next 15 days on this stretch of road. [2 marks]

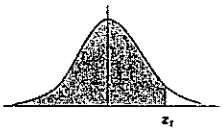
Continue...

(c) A personnel test is designed to test a job applicant's cognitive and physical abilities. It is known that for all the tests administrated last year, the distribution of scores was approximately normal with a mean of 75 and a standard deviation of 7.5. If Marina is planning to take this test soon, what should be her score in the test so that only 10% of all applicants' scores will be higher than hers? Round up your answer to an integer.

[3 marks]

End of Page

Standard Normal Distribution



$$p(z \le z_1) = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^{z_1} e^{-\frac{1}{2}z^2}\, dz$$
